Research Contents Knowledge Transfer Toward an Inclusive University through Spiral Up Approach

My activity foster improvement in our education programs and enlightenment in Universal Design. The core concept of this activity is to raise awareness of the importance of improvements in Universal Design Education of built environment by the international cooperation.

The improvements have been accomplished through the international studies between Akashi National College of Technology and Diponegoro University since 2007, especially in the Department of Architecture. The development of the universal design education was made possible by the generous cooperation between Akashi National College of Technology and Diponegoro University. The Department of Architecture - Diponegoro University have has opened developed a course center of study on Universal Design for the first time in 2011.

Furthermore, both universities have shared good examples of access improvement, as well as bad examples, and have succeeded in the accumulation and analysis of data.

As a result of these Universal Design educational program sharing of knowledge and experiences, Akashi National College and Diponegoro University are developing toward an inclusive university.
